

Have your say in which UK species get sequenced next!

Thousands of school students are learning about different UK species and voting for their favourites to have their genomes sequenced next year. We're inviting parents, carers and their local communities to join the fun!

This online event is a chance to find out about the species, learn about genetic sequencing and contribute to future science.

From 6th November - 8th December, 40 UK species are competing to have their genome sequenced, and your votes decide which 5 species win.

Each species will be championed by a wildlife enthusiast, displaying their passion for the species and trying to convince you they are deserving of your vote.

The species up for your votes include the Scottish wildcat, the common starfish and the emperor dragonfly.
